
Update - FDR/UPSTREAM v3.2.0a

FDR/UPSTREAM Workstation/Server v3.2.0a is a minor update release. There are no significant changes.

Technical Specifications

☐ Previous version:

FDR/UPSTREAM PC version 3.2.0a is an update of production version 3.2.

☐ Operating systems affected by this upgrade:

All

☐ FDR/UPSTREAM MVS release prerequisites:

3.2 is recommended, particularly if you have UPSTREAM/SOS, but all prior releases of FDR/UPSTREAM MVS will operate.

☐ Problem resolutions:

- (v3.2.0a) Hard links restore correctly.
- (v3.2.0a) Restore and Inquiry (old) updates the specification field correctly.
- (v3.2.0a) Duplicate management selects and deletes files correctly.

☐ Who should upgrade:

Users who need one of the problem resolutions or enhancements.

☐ New configuration parameters:

None.

☐ New overall parameters:

None.

☐ New file spec parameters:

None.

☐ New environment variables:

<u>Name</u>	<u>Default</u>	<u>Description</u>
USNOWINSOCK (NLM only)	Not defined	If defined, UPSTREAM will only use BSD sockets for TCP/IP. This will also disable use of the attach manager facility.
USTRUNCONCLOSE	Not defined	If defined, On restores UPSTREAM will wait until file close before removing any prior file contexts. This will disable sparse files.
